

## **Biology of Cancer and Infection Laboratory**

CEA – Inserm U1036 – Joseph Fourier University – CNRS

### Post-Doctoral Position in Grenoble (France)

---

A position funded by the French National Alliance for Life Sciences and Health (Aviesan) is available starting in January-February 2012 to study *Pseudomonas aeruginosa* infection, in the group of Ina Attrée under supervision of Philippe Huber. Studies will focus on the host kinases hijacked by toxins of the type 3 secretion system. The kinases and signaling pathways involved in cell intoxication will be investigated using a wide range of cellular and molecular techniques, including high throughput screening and cell imaging.

#### **The Applicant**

The applicant should have obtained her/his PhD less than 2 years ago and should be 30 years-old maximum.

The successful candidate will have hands on experience in cell biology and cellular imaging. Conceptual training in the field of signal transduction is necessary. Strong written and oral communication skills are required.

#### **Funding**

CEA postdoc salary scale (2 years)

#### **Contact**

Please send full CV including research interests and 2 or 3 references with contact information to:

#### **Dr Philippe Huber**
